

Important decisions taken by BIS

Criteria for acceptance of conformity test reports of Critical Components where relevant IEC standards are not available

Compliance to UL or other national/regional/international standards shall be accepted for critical components, wherever IEC standards are not available for critical components.

Conformity test reports of Critical Components

Identification of Critical Components shall be the responsibility of test lab. While scrutinizing the test reports, BIS would accept the critical components as identified by the test labs in the test reports issued by them. BIS shall check only the statement of conformity/non-conformity to applicable standard mentioned in the list of Critical Components while scrutinising the test reports.

The conformity certificates for Critical Components may or may not be part of test reports issued by the labs.

For critical component where other standards i.e. UL, DIN, EN, JIS & CSA etc. are harmonised with relevant IEC standards are existing.

The conformity of Critical Components to other standards harmonised with IEC would be accepted.
